## SN74LVC2G17: Dual Schmitt-Trigger Buffer

### DESCRIPTIONS

The SN74LVC2G17 Dual Schmitt-trigger buffer is designed for 1.65V to 5.5V  $V_{CC}$  operation.

The SN74LVC2G17 device contains two buffer and performs the Boolean function  $Y=A$ . The device functions as two independent buffers with Schmitt-trigger inputs, so the device has different input threshold levels for positive-going ( $V_{T+}$ ) and negative going ( $V_{T-}$ ) signals to provide hysteresis ( $\Delta V_T$ ) which makes the device tolerant to slow or noisy input signals.

This device is fully specified for partial-power-down applications using  $I_{off}$ . The  $I_{off}$  circuitry disables the outputs, preventing damaging current backflow through the device when it is powered down.

The SN74LVC2G17 is available in Green SOT23-6 and SC70-6 packages. It operates over an ambient temperature range of -40°C to 125°C.

### FEATURES

- **Operating Voltage Range: 1.65V to 5.5V**
- **Low Power Consumption: 0.1µA (TYP)**
- **Operating Temperature Range: -40°C to 125°C**
- **Input Accept Voltage to 5.5V**
- **High Output Drive: ±24mA at  $V_{CC}=3.0V$**
- **$I_{off}$  Supports Partial-Power-Down Mode Operation**
- **Micro Size Packages: SOT23-6, SC70-6**

### APPLICATIONS

- **AC Receiver and**
- **Home Theaters**
- **Blu-ray Players and Home Theaters**
- **Desktops or Notebook PCs**
- **Digital Video Cameras (DVC)**
- **Mobile Phones**
- **Personal Navigation Device (GPS)**
- **Portable Media Player**

### PACKAGE/ORDERING INFORMATION <sup>(1)</sup>

| PRODUCT     | ORDERING NUMBER | TEMPERATURE RANGE | PACKAGE LEAD          | PACKAGE MARKING <sup>(2)</sup> | MSL <sup>(3)</sup> | PACKAGE OPTION     |
|-------------|-----------------|-------------------|-----------------------|--------------------------------|--------------------|--------------------|
| SN74LVC2G17 | SN74LVC2G17DCKR | -40°C ~+125°C     | SC70-6 <sup>(4)</sup> | C7R                            | MSL3               | Tape and Reel,3000 |
|             | SN74LVC2G17DBVR | -40°C ~+125°C     | SOT23-6               | C175                           | MSL3               | Tape and Reel,3000 |

NOTE:

- (1) This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document.
- (2) There may be additional marking, which relates to the lot trace code information (data code and vendor code), the logo or the environmental category on the device.
- (3) MSL, The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications.
- (4) Equivalent to SOT363.

## ESD Ratings

The following ESD information is provided for handling of ESD-sensitive devices in an ESD protected area only.

|                            | VALUE | UNIT |  <b>ESD SENSITIVITY CAUTION</b><br>ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications. |

| Machine Model (MM)         | ±200  |      |                                                                                                                                                                                                                                                                                                                                                                                   |

NOTE:

- Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under Recommended Operating Conditions is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- The input and output negative-voltage ratings may be exceeded if the input and output current ratings are observed.
- The value of V<sub>CC</sub> is provided in the Recommended Operating Conditions table.
- The package thermal impedance is calculated in accordance with JESD-51.
- The maximum power dissipation is a function of T<sub>J(MAX)</sub>, R<sub>θJA</sub>, and T<sub>A</sub>. The maximum allowable power dissipation at any ambient temperature is P<sub>D</sub> = (T<sub>J(MAX)</sub> - T<sub>A</sub>) / R<sub>θJA</sub>. All numbers apply for packages soldered directly onto a PCB.

## ELECTRICAL CHARACTERISTICS

over recommended operating free-air temperature range (Full = -40°C to +125°C, typical values are at  $T_A = +25^\circ\text{C}$ , unless otherwise noted.) <sup>(1)</sup>

(1) All unused inputs of the device must be held at V<sub>CC</sub> or GND to ensure proper device operation.

(2) Limits are 100% production tested at 25°C. Limits over the operating temperature range are ensured through correlations using statistical quality control (SQC) method.

(3) Typical values represent the most likely parametric norm as determined at the time of characterization. Actual typical values may vary over time and will also depend on the application and configuration.

## AC Characteristics

(1) All unused inputs of the device must be held at  $V_{CC}$  or GND to ensure proper device operation.

(2) Limits are 100% production tested at 25°C. Limits over the operating temperature range are ensured through correlations using statistical quality control (SQC) method.

(3) Typical values represent the most likely parametric norm as determined at the time of characterization. Actual typical values may vary over time and will also depend on the application and configuration.

## PARAMETER MEASUREMENT INFORMATION

- NOTES:
- A.  $C_L$  includes probe and jig capacitance.
  - B. Waveform 1 is for an output with internal conditions such that the output is low, except when disabled by the output control. Waveform 2 is for an output with internal conditions such that the output is high, except when disabled by the output control.
  - C. All input pulses are supplied by generators having the following characteristics:  $PRR \leq 10 \text{ MHz}$ ,  $Z_O = 50 \Omega$ .
  - D. The outputs are measured one at a time, with one transition per measurement.
  - E.  $t_{PLZ}$  and  $t_{PHZ}$  are the same as  $t_{dis}$ .
  - F.  $t_{PZL}$  and  $t_{PZH}$  are the same as  $t_{en}$ .
  - G.  $t_{PLH}$  and  $t_{PHL}$  are the same as  $t_{pd}$ .
  - H. All parameters and waveforms are not applicable to all devices.
